

Adding users

Yuriy Andamasov - 2018-10-13 - 0 Comments - in User Management

New users may be added to a VyOS system using the following commands:

```
vyos@vyos-rtr:~$ configure
vyos@vyos-rtr# set system login user jsmith full-name "John Smith"
vyos@vyos-rtr# set system login user jsmith authentication plaintext-
password examplepassword
vyos@vyos-rtr# set system login user jsmith level admin
vyos@vyos-rtr# commit
vyos@vyos-rtr# save
```

This will create a new user with the username `jsmith` and the password `examplepassword`. This user will have admin privileges; to create an operator-level user, replace `admin` with `operator` in the second to last line.

You may also wish to configure SSH public key authentication for this user at this time.
