

Dummy interfaces

Dmitriy Eshenko - 2019-09-19 - 0 Comments - in Interfaces

Dummy interface — much like the loopback, except you can have as many as you want.

Dummy interfaces can be used as interfaces that always stay up (in the same fashion to loopbacks in IOS), or for testing purposes.

Configuration commands:

```
interfaces
  dummy
    address
    address
    description
    disable
    ip
      <usual IP options>
    ipv6
      <usual IPv6 options>
```

Example:

```
vyos@vyos-rtr# set interfaces dummy dum0 address 192.0.2.10/32
[...]
vyos@vyos-rtr# show interfaces dummy
  dummy dum0 {
    address 192.0.2.10/32
  }
[edit]

vyos@vyos-rtr# set protocols bgp 64512 neighbor 203.0.113.1 update-
source dum0
```
