Run (command)

Dmitriy Eshenko - 2019-10-01 - 0 Comments - in CLI Reference

The **run** command allows you to execute any operational mode commands without exiting the configuration session.

Simply append the operational command to **run**:

```
[edit]
vyos@vyos-rtr# run show interfaces
Codes: S - State, L - Link, u - Up, D - Down, A - Admin Down
Interface        IP Address                    S/L  Description
---------        ----------                    ---  -----------
eth0             1.2.3.4/24                    u/u
```
