Set/change the password of a user

Dmitriy Eshenko - 2019-10-01 - 0 Comments - in User Management

To change the password of a user

1. Enter configuration mode
`configure`

2. Set password

```
set system login user [username] authentication plaintext-password  
[password]
```

Note: The password is stored encrypted after commit.

3. Commit and save changes

```
commit  
save
```
